

Splash screen

The app must show information for Venues and Events related with live theater

- All data is provided by webservices that returns JSON data. These webservices are ready for use.
- On every startup, app must validate if webservices are up and running. The «validate ws status» method, returns some data for app configuration.
- Graphics and colours will be provided following the developer requirements.
- Webservice calls uses md5 hash on sent parameters.
- The venues and events can be marked as starred. This must be saved locally.
- Some menu options use GeoLocation services.

Main Menu

Goto «Events Menu»

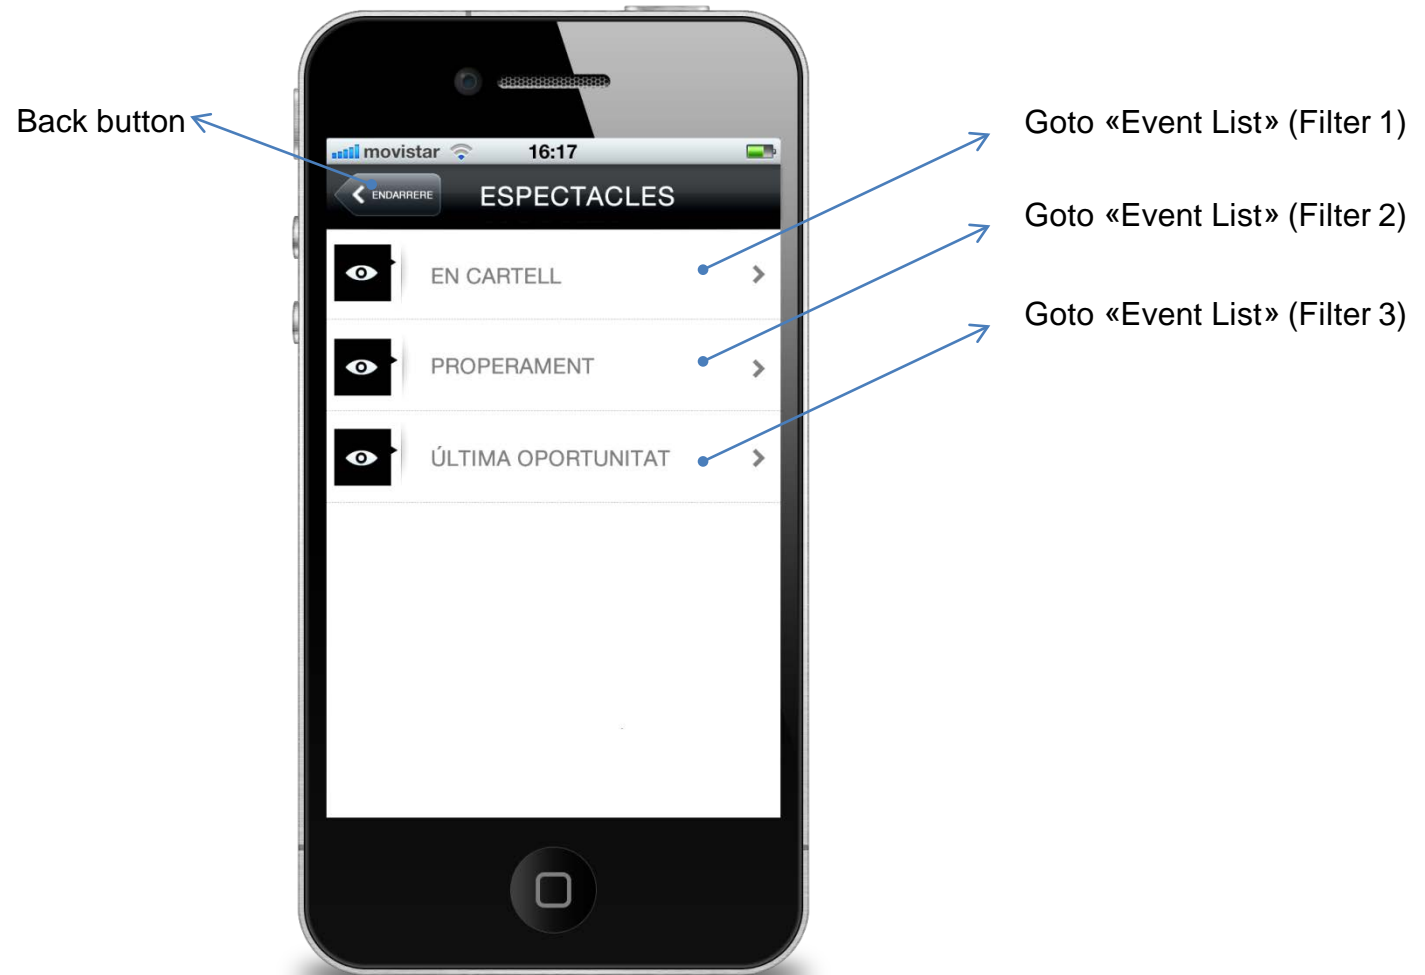

Goto «Venue List»

Goto «Main Calendar»

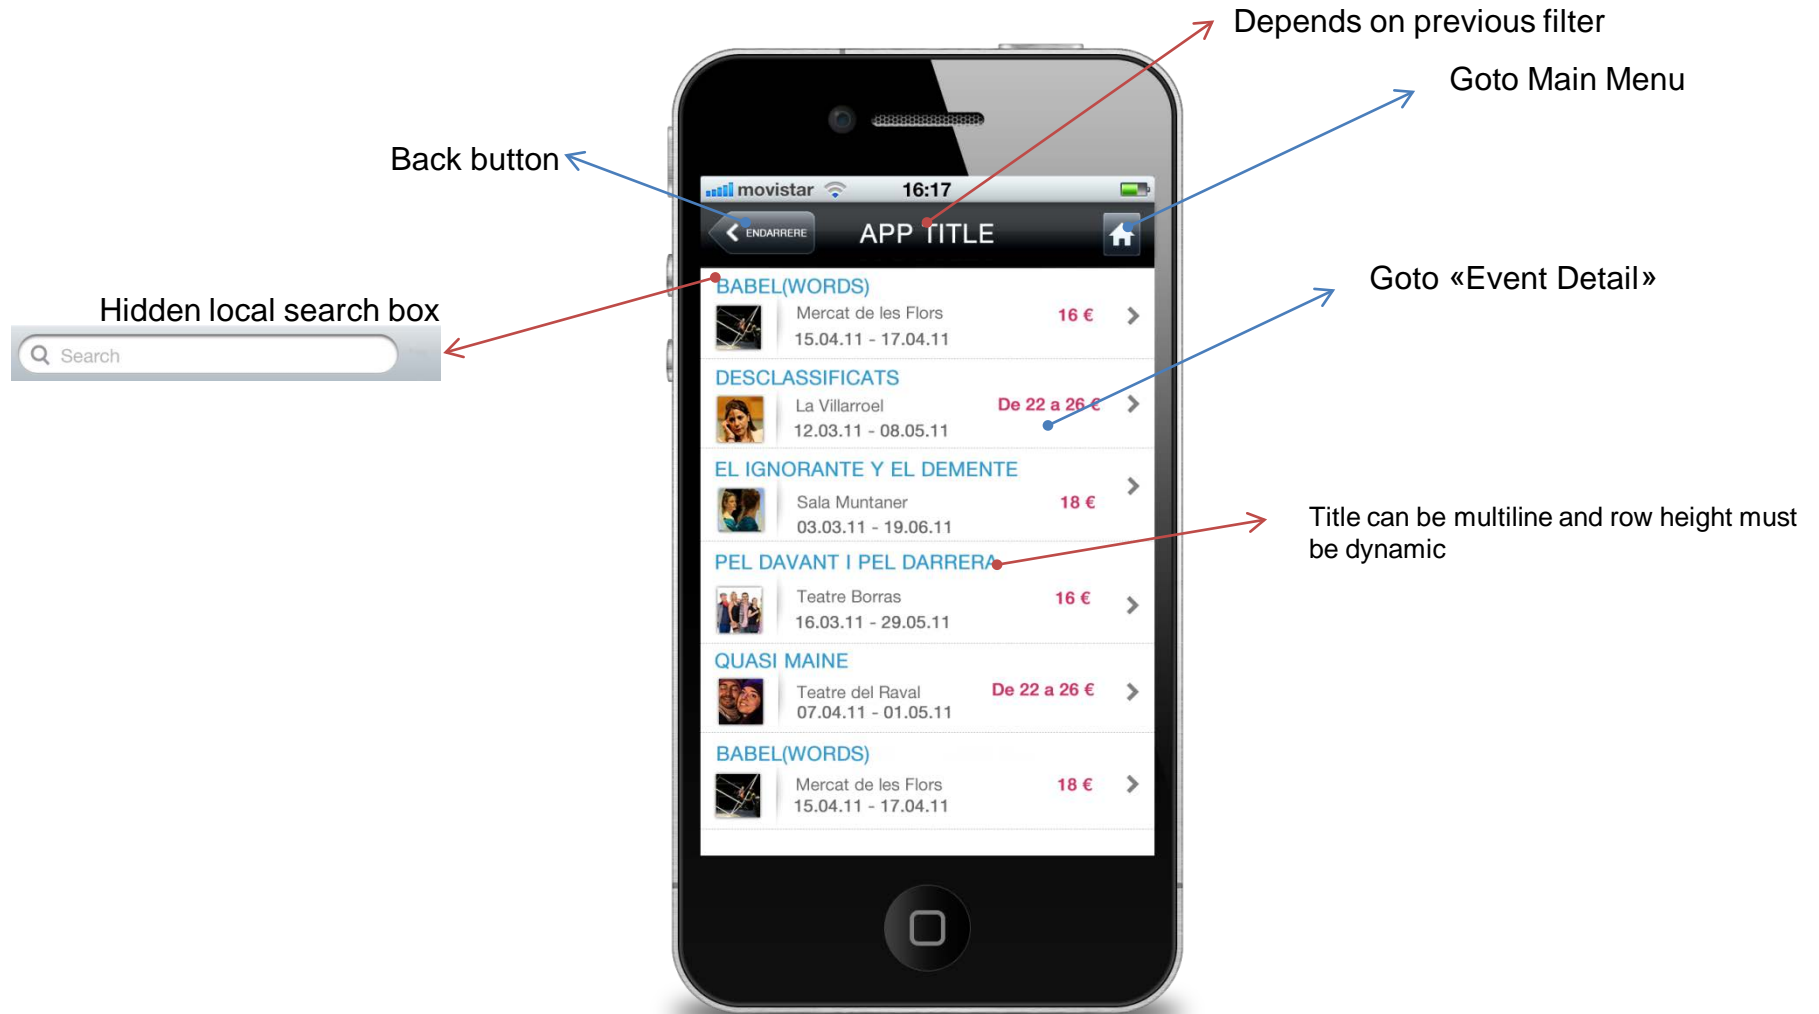

Goto «Venue List w.Distances»

Goto «Starred»
